

(g) New Developments in the Wallingford Procedure

M Osborne gave a review of development work relevant to the Wallingford Procedure..

- GURVIL - a plotting programme for use with WASSP, available now.
- MICRO RAT - an interactive rational design programme for design of small systems.
- WALRUS - an improved version of WASSP with more facilities and better handling of hydrological and hydraulic processes.
- SPIDA - a programme for analysing looped drainage systems.
- MOSQUITO - a water quality sub-model, probably to be as add-on.
