

WALLRUS - VIS - Short presentation

Andrew J Brown - Wallingford Software

The WALLRUS VISUALISATION module will be an additional module available with version 1.4 of WALLRUS. It will add exiting new graphical capabilities to the task of post processing WALLRUS results.

The Visualisation module facilities will include:-

- * a new fast editor, with individual data item descriptions and help messages
- * long section production
- * simulation results displayed in plan including:-
 - surcharged pipes
 - flooded manholes
 - maximum water levels produced
- * production of a pre-simulation plan diagram of the catchment for checking pipe connectivity
- * ancillaries in a network highlighted in different colours
- * viewing of WALLRUS sewer system data in graphical mode

All of these facilities can be easily accessed from the WALLRUS menu together with the existing range of facilities the menu provides.
